DETAILED ACTION

1. Acknowledgment is made of applicant's preliminary amendment which was received by the Office on January 4, 2002. This document has been made of record in the file as Paper No.3.
2. Claims 1-28 are active and pending.

Priority

3. Applicant's claim for priority as a 371 national stage application of Canadian PCT application PCT/CA00/00808, filed July 7, 2000, is acknowledged.

Information Disclosure Statement

4. Acknowledgment is made of applicant's Information Disclosure Statement (PTO-1449) which was received by the Office on June 27, 2002. This document has been made of record in the file as Paper No.7.

Drawings

5. Applicant's formal drawings have been approved by the Examiner.

Specification

6. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. Claims 1, 3, 6, 15, and 17 are rejected under 35 U.S.C. 102(a) as being anticipated by the Reucher et al article “Spatial Filtering of Noninvasive Multi-electrode EMG Part I – Introduction to Measuring Technique and Applications” (Applicant’s Prior Art).

The Reucher et al article “Spatial Filtering of Noninvasive Multi-electrode EMG Part I – Introduction to Measuring Technique and Applications” (IEEE Transactions on Biomedical Engineering), cited by the applicants as Prior Art, describes a method for enhancing the quality of a plurality of sensed EMG signals (Fig.3) by using weighting factors. Page 3 of the article mentions the use of a “weighted summation of ...[electrode] signals” (left column, line 13) performed by an amplifier stage.

In regard to claims 3, 15, and 17, Reucher et al adjusts its weighting factors for both noise cancellation and inter-electrode distances by appropriate filter selection. Specifically, for electrodes spaced between 3-6mm apart, an LDD-filter is recommended, while for electrodes spaced 9mm apart a “matched filter” is recommended (p.6, left column, lines 30-36).

Art Unit: 3762

9. Claims 1 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Hogrel et al '032 (PCT).

The Hogrel et al '032 WIPO/PCT document, cited herein by the Examiner, describes a device for performing non-invasive electromyographic measurements (Fig.3). The device comprises an electrode array E (Fig. 1a) which detects electromyographic signals and sends them through amplifier circuits 5,6 (Fig.3) for "spectral filtering and weighted summation" (Abstract, lines 6-8).

Allowable Subject Matter

10. Claims 2, 4, 5, 7-14, 16, and 18-28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

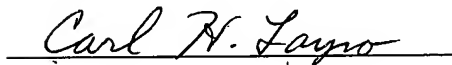

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The Toomim et al '208 patent is cited for its pertinent EMG detection features and use of weighting factors. Unlike applicant's device, that of Toomim et al does not combine the weighted signals in order to get a higher quality EMG signal. Rather, the signals are processed to determine overall of muscle health..
